

Monitoring Air Quality for a Healthier Life

HibouAir, your ultimate solution for monitoring air quality and maintain a healthier indoor environment. Discover how our cutting-edge technology helps you to live your best life indoors.

HibouAir Cloud solution

How it works

Installation of sensor

Place the device in your preferred location and connect to a power source.

Data collection

The device collects air quality data of important elements of the environment.

Data transmission

The data is transmitted to the cloud instantly using a secure & reliable connection.

Data processing

web-based application provides graphical view for monitoring and analysis.

Key Features:

Real-Time Monitoring

Stay in control with instant updates on your selected device's air quality – from CO2 levels to particulate matter and more.

Intuitive Charts

Visualize data effortlessly with charts that simplify complex air quality parameters, making it easy to understand and act upon.

Custom Dashboards

Tailor your experience with custom widgets for real-time data, 24-hour averages or Virus Index, providing personalized insights.

Historical Data Insights

Dive deep into the past with historical data analysis, allowing you to track changes and make informed decisions.

Device Comparison

Compare air quality parameters between devices – monitor pressure, temperature, humidity, CO2, and more for a comprehensive overview.

Advance Features

Average Daily Reports

Receive comprehensive reports on device data parameters, empowering you to maintain a consistent, healthy indoor environment.

Step Charts

Analyze step-by-step variations in device data parameters, helping you identify patterns and trends.

Fleet Management

Organize your space efficiently by creating rooms and adding devices, offering a complete overview of air quality in each area.

Virus Index Report

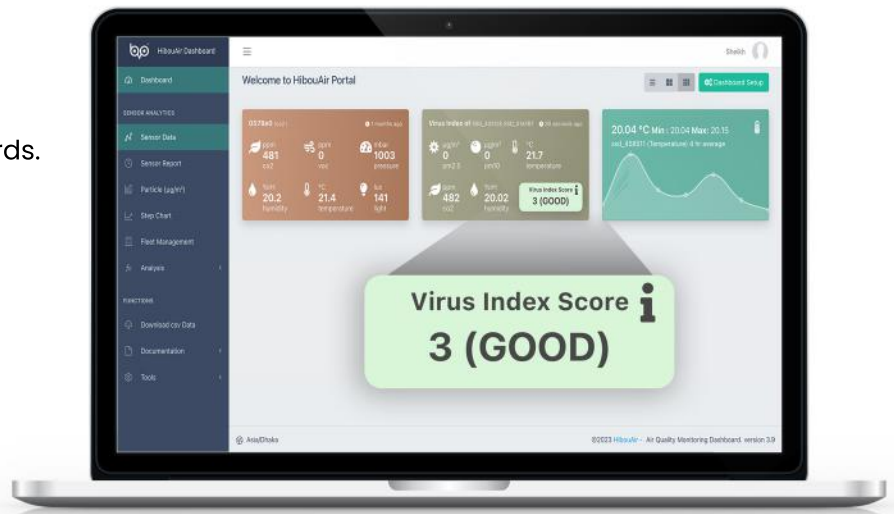

Stay informed about the virus index in real time, with scores from 1 to 10, helping you gauge the risk of virus spread.

Exportable Reports

Seamlessly export reports for in-depth analysis and share insights with professionals or for your personal records.

User-Friendly API

Our open API ensures easy integration with third-party systems, expanding possibilities for a connected, smart ecosystem.

Real-Time Alert Reports

Stay informed with real-time alerts on selected parameters, providing immediate notification for proactive management of your indoor air quality.

Weekly Reports

Receive weekly insights on your selected device and parameters, allowing you with continuous, data-driven improvements for long-term health.

Mobile Application

- Access real-time and historical air quality data on-the-go.

- Effortlessly connect your device to the cloud for continuous monitoring.
